## Social Media Essay Sample

**Topic:** Describe Two Undesirable Effects of Social Media

### **I. Example of an Introduction**

Online-based communication methods form an indispensable fragment of human life. Basically, many individuals rely on social media for communicating and maintaining close contact with friends and family members. Despite the presence of such benefits, the wide use of social media leads to adverse effects. Because social media is a popular mode of communication, it continues to cause negative impacts, like cyberbullying and suicidal thoughts.

### **II. Body Sample**

#### **A. Effect 1: Cyberbullying**

The wide use of social media platforms leads to cyberbullying among teenagers. For example, the majority of teenagers who use social media platforms have experienced cyberbullying in the form of name-calling and rumor-spreading. Basically, these abusive online behaviors lead to damaging resentments and unmatched hatred among teenagers. In turn, this problem leads to chronic stress among victims. Hence, social media platforms expose youths to cyberbullying, including suicidal thoughts.

#### **B. Effect 2: Suicidal Thoughts**

Social media use has a direct contribution to a suicidal way of thinking. For example, many scientists show in their study reports how the Internet and social media platforms influence suicidal thoughts. In this case, damaging resentments from cyberbullying and intimidation in social media motivate youths to think about suicide as a way to get out of problems they face. Moreover, online interactions expose teenagers to enter cults and groups that consider suicide as an easier way of escaping social challenges. Hence, interactions through social media is a source of motivation for teenagers to develop suicidal thoughts.

### **III. Example of a Conclusion**

In summary, social media is a popular mode of communication today. In particular, the development of online platforms as a suitable tool of interaction exposes teenagers to adverse effects like cyberbullying. Moreover, many youths develop anger and resentments that may lead to suicidal thoughts. Thus, scientists need to develop new methods of how to overcome such outcomes of media use.
